Our Technology

- ◎ **AMS: verify online Portal with complete workflow system**
 - > Deployed on Amazon's Cloud based virtualization platform.
 - > Our system can scale up as volumes rise.
 - > Storage system is built on Elastic Storage, which ensures our storage system scales constantly with rising data.
 - > Firewalled for security
 - > Browser access secured with end-to-end SSL. All transactions are SSL encrypted.

Our Technology

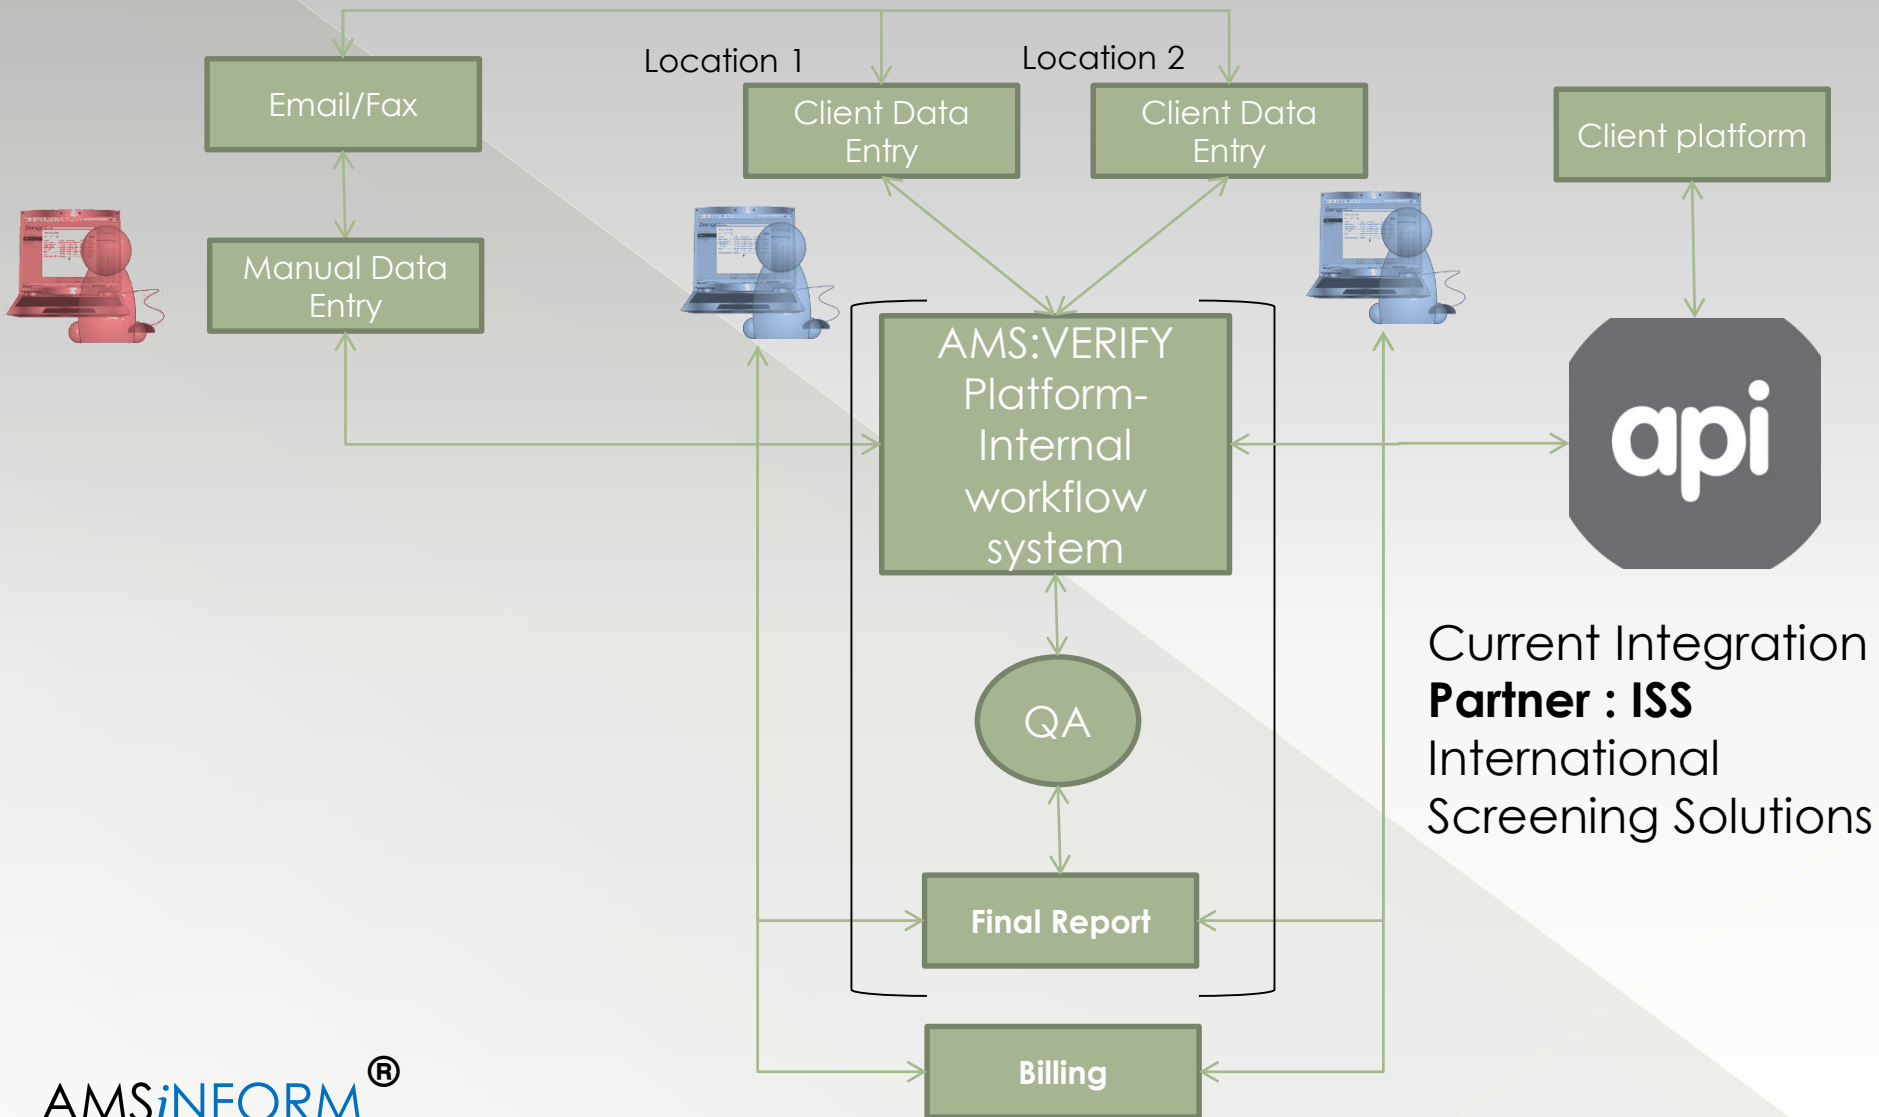

- > Separate Production and Development Staging systems for deployment
- > Multi-level access system controls and protects data from multiple layers of users. Access only to required information.
- > Real time status updates through e-mail as and when attention is required. At each point client is informed about the status.
- > Real time reporting of orders for clients
- > Constantly maintained and upgraded/monitored for operational efficiency.
- > Regular backups are maintained for redundancy. Additional Full operating system snapshots are also created for a full restore in case of eventualities.
- > Transactional Database system with automatic rollback.
- > Database and Code in-memory caching technology for fast deployment.

Our Technology

◎ **AMS : Unique Features**

- > Client Access & Co branded website.
- > Online ordering + Report Delivery.
- > Custom final reports/MIS reports

Integration Options

API

- > Our API – work in progress
- > Integrate with your ATS API
 - You provide API documentation &
 - Customization and Changes handled at our end
- Direct CSV/text file download from a secure location on your website and re-upload through FTP

API Success Story

Successfully integrated with client – ISS API

Before

1. Manual order entry – 4-5 min/order
2. Data integrity issues
3. Labor intensive
4. Manual addition of attachments
5. Manual order submission on client website after QA
6. Reports were sent by e-mail, which client had to transliterate on their platform for end clients
7. Status updates were sent by e-mail and replies were manually acknowledged leading to high TATs
8. High TAT due to time differences

After

1. Automated order creation using API. With client's current infrastructure, we are processing over 10 orders a minute. Orders are fetched in regular time intervals through the day.
2. No Data integrity issues. Constant check and balancing system.
3. No data operator/entry required
4. Automated attachment downloads directly into the system.
5. Orders are automatically refreshed for additional information, or attachments.
6. Automated final report submission after QA in clients format. Increased clients efficiency & TAT.
7. Status updates/notifications are sent and received automatically through a refresh mechanism. TAT's are reduced due to constant interaction.

Benefits of Integrating with AMS Inform

- Full integration possible.

- No duplicate information entry.
- Unlike other providers, AMS:VERIFY is custom in-house built solution and is not an off-the-shelf product, so we can customize anything as required. This also allows to rapidly make features available.
- Logs are maintained for technical issues and correspondence. Which allows fast debugging and problem resolution.
- We can adapt to your needs.
